WAD Website ideation document
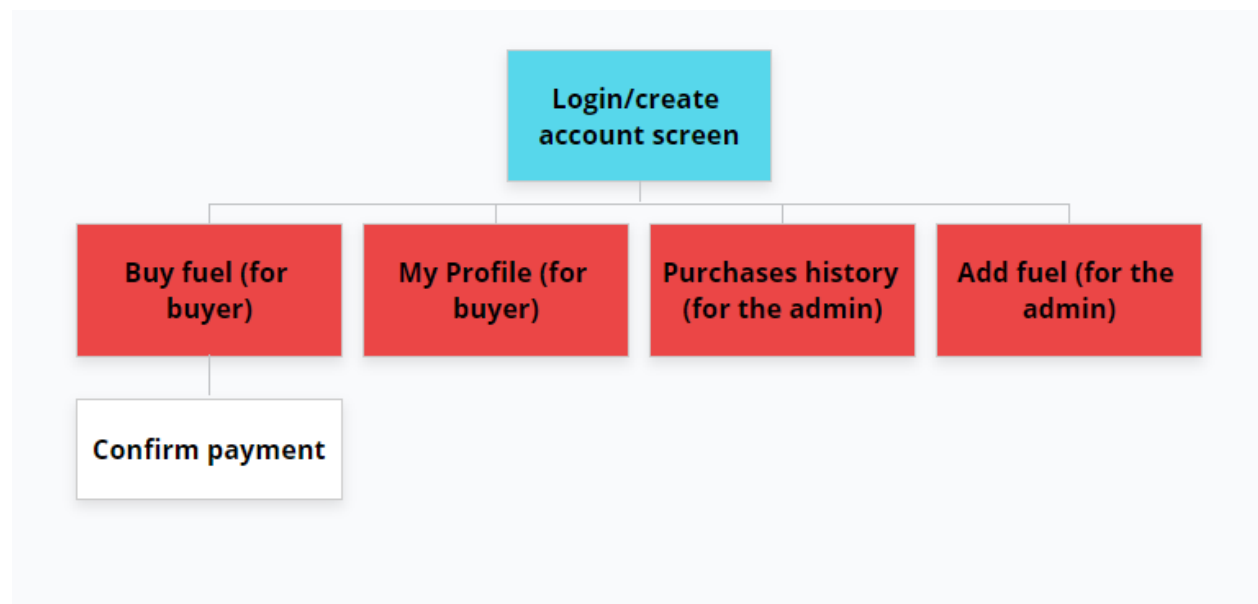

Project git repository:

Blagoev,Daniil D.A. / WAD_Fitness · GitLab (fhict.nl)

Project description:

The purpose of this web application is to serve as a place where different types of fuel (gasoline, diesel) can be bought. There are 2 different types of accounts. The 'admin' accounts will have the permission to add/remove types of gas and edit the prices. The other type of accounts is the buyers'. They will only be able to buy from the website by choosing the type they want and setting the number of liters they would like to buy. Different types of gas will have different cleanliness of fuel, kilometers per liter traveled, viscosity and suitability for different engine types. When making an account, you will be required to enter your card for payment and address for delivery before you can access the website. Buyers' accounts will have the option to edit their delivery address and payment card. In the admin account there will be a table with logs of all purchases for the sake of statistics.
